

CAN-CR110/FO

CAN / CAN FD repeater with screw terminals and fiber optic connector

The CAN-CR110/FO is used for galvanic isolation of two segments of a CAN / CAN FD network. As a special feature, the repeater separates a defective segment from the rest of the network, allowing the remaining network to continue working. After the fault has been eliminated, the segment is automatically switched back to the network. The galvanic isolation is provided for the CAN / CAN FD segments as well as for the power supply.

FEATURES AND BENEFITS

- Fiber optic enables transmission in areas with high electromagnetic disturbances
- CAN and CAN FD interfaces in one device
- Cost savings due to simple wiring
- Increased system reliability
- Almost no influence on real-time behavior
